

An Introduction to Proof via Inquiry-Based Learning

Errata

Dana C. Ernst

April 14, 2023

All errors listed below have been corrected in the version of the book that has been compiled from the current source. Page numbers below reference the print version of the textbook published by AMS/MAA Press.

If you think you have found any errors not already listed here, please submit an issue on [GitHub](#) or send me an email at dana.ernst@nau.edu.

- Page x, line −5: Replaced “undoubtably” with “undoubtedly”. Although, perhaps the former is acceptable. [Pietro Monticone]
- Page 54, Theorem 4.2: It would be nice if Item (ii) began “for all $k \geq 1$ ”. This is an instance of an implicit universal quantifier for a conditional statement. In this case, the implicit universe of discourse is the set of natural numbers. However, including “for all $k \geq 1$,” leads to a nice parallelism with Theorem 4.9. [Ben Ford]
- Page 56, Theorem 4.9: Item (ii) should start with “for all $k \geq a$,”. [Ben Ford]
- Page 57, Skeleton Proof 4.10: In Item (ii), it should say “For all $k \geq a$, if $P(k)$ is true, then $P(k + 1)$ is true.” as opposed to “For all $k \in \mathbb{Z} \dots$ ” [Ben Ford]
- Page 60, Problem 4.33: In Item (i), the final string is missing a leading one. It should be “011101 \rightarrow 111101”. [Ben Ford]
- Page 63, line 1: Missing the word “the” between “into” and “structure”.
- Page 82, line −1: “counterexample” should be replaced with “contradiction”.
- Page 105, Corollary 7.74: As stated the corollary is incorrect. However, including the hypothesis “ $a \in \text{rel}(a)$ for all $a \in A$ ” makes the statement true. However, I think it is incorrect to refer to this result as a “Corollary”, so it has been renamed “Theorem”. As a result, the reference to the result in Example 7.80 and the paragraph prior to Theorem 7.81 have been updated. [Blake Farman]
- Page 106, Example 7.80 and paragraph prior to Theorem 7.81: “Corollary 7.74” replaced with “Theorem 7.74.”
- Page 128, Problem 8.66: It is impossible to find an example for Part (a) with the given sets. “Let $X = \{a, b\}$ and $Y = \{1, 2\}$ ” has been replaced with “Complete each of the following. Consider using finite sets and drawing a function diagram to define your functions.” [Blake Farman]

- Page 131, line 7: Corrected the spelling of “Definition.” [Pietro Monticone]
- Page 158, line 1: Missing the word “look” between “you” and “at”. [Roy St. Laurent]
- Page 161, line 11: Removed spurious “)”. [Pietro Monticone]
